

**HOW WE CAN SERVICE YOU**

**dB SYSTEMS-USA represents quality and cost effective IT and Automation services for over 25 years.**

We have a large client base where the implementation of office/industrial Local Area Networks was tailored around the primary software applications. Servers established, security enabled, remote access and administration employed, and office personnel trained. These areas include medical, legal, consumer services, government, insurance and real estate offices.

For Industrial Automation, many of our strengths are in the area of water & wastewater management, converting, modernizing, and automating equipment to achieve 100%\* increase in production rates. At the same time implementing reliability and ease of troubleshooting.

\*Mechanical and process modifications were needed to be made to obtain these same results and may vary from application to application.
